SUMMARY

Full-stack Software Engineer with 10 years in technology, moving from infrastructure into development — a background that shaped how I build: reliability, performance, and maintainability from the first commit. Currently the sole engineer behind a fashion/retail company's technology platform: built AWS infrastructure as code from scratch (Terraform, 100% CI/CD with OIDC, zero static credentials) and shipped 4 production products in 6 months, including a POS system that processed live payments at an in-person sales event and a Rust/Tauri desktop app with RFID running on a factory floor. Own the full cycle — database, backend, frontend, integrations, and observability. Experienced integrating AI/LLMs (OpenAI, Anthropic APIs) into production systems, including an AI/OCR document parser that eliminated manual data entry in factory operations. Fluent in English for meetings and async collaboration. Open to remote roles at companies scaling in the US or Europe.

SKILLS

Languages & Frameworks: TypeScript, JavaScript, React, Node.js, Python (FastAPI, Flask), Rust, Go

Cloud & Infrastructure: AWS (Lambda, SQS, RDS, Cognito), Terraform, Docker, CI/CD (GitHub Actions, OIDC)

Data: PostgreSQL, Supabase, database design & performance optimization

AI/LLM: OpenAI API, Anthropic API, prompt engineering, production AI/OCR pipelines

Other: WebSockets, RFID integration, payment processing (PIX, card terminals, invoicing), system design, IAM/access automation

EXPERIENCE

Founding Full-Stack Software Engineer — Berzerk (Fashion / Retail Tech Platform)

Jan 2026 – Present (8 months) · São Paulo, Brazil

Sole engineer building the company's technology platform from scratch: 4 products shipped to production, 3,000+ commits across 9 projects, and the entire AWS infrastructure as code, in 6 months.

- Cut product launch time from months to days by building reusable Terraform infrastructure with 100% CI/CD deploys (GitHub Actions + OIDC, zero static credentials) — internal store live in ~48h, financial dashboard with real data in ~1 week.
- Enabled the company's first in-person sales event on a self-built POS, processing live payments (PIX, credit/debit cards, and card terminals via Mercado Pago, Stripe, and SuperTEF) with electronic invoicing and automated label printing — from mockup to production in ~2 months.
- Replaced 2 legacy systems with a single industrial platform in ~5 weeks, covering the factory end-to-end (fabric → cutting → sewing → shipping), with a configurable workflow engine (process changes without redeploy) and real-time picking via WebSocket + RFID.
- Sped up executive dashboard reads to under 100ms by materializing KPIs, with resilient webhook ingestion (SQS + daily reconciliation), P&L reporting, and true margin per SKU.
- Digitized the factory floor with an in-house Rust/Tauri desktop app (15+ production releases), natively integrating an RFID printer and shipping signed auto-updates operators apply in ~30 seconds.
- Eliminated manual data entry of supplier packing lists by building an AI/OCR parser in the factory ERP, refactoring it from a prototype into a service-layer architecture with a state machine.
- Launched a multi-tenant influencer platform in ~6 weeks with automated commission calculation (percentage, flat, and GMV-based) and LGPD compliance.
- Reduced cloud costs through budget caps, right-sizing, database consolidation, and scheduled stop/start in development environments.

Stack: TypeScript, React, Node.js, PostgreSQL, AWS (Lambda, SQS, RDS, Cognito), Terraform, Supabase, Rust/Tauri

Full-Stack Developer (Python) — WeService (contracted to Itaú Unibanco)

Jul 2025 – Jan 2026 (7 months) · São Paulo, Brazil

- Developed and maintained web applications for the Itaú Datacenter Portal, a self-service platform for infrastructure operations, using Python, Flask, HTML, CSS, and JavaScript.
- Built and maintained RESTful APIs for data consumption and critical task automation.
- Contributed to intuitive front-end interfaces that streamlined customer-facing processes.
- Focused on clean, testable, and scalable code to optimize platform performance and reduce operational load on internal teams.

Freelance Developer — Self-Employed

Oct 2024 – Jun 2025 (9 months) · Remote

- Completed Boot.dev (backend development) and Curso.dev programs, strengthening backend engineering, system design, and modern development practices.

Stack: Python, JavaScript, TypeScript, Go

Software Engineer — QuintoAndar

Sep 2021 – Sep 2024 (3 years 1 month) · São Paulo, Brazil

- Designed Python automation systems that cut user provisioning time from ~10 minutes to under 1 minute, using git-based review workflows to eliminate manual processes and human error in critical access operations.
- Built microservices with Python, AWS, and Docker to manage company users, decreasing access-team support calls by over 60%.
- Developed Node.js automations that streamlined employee onboarding/offboarding, reducing operational work by 40%.
- Implemented SSO across 100% of macOS devices using Kandji Passport, improving login security and user experience.
- Led integration of newly acquired companies into the IT ecosystem as part of M&A processes, ensuring seamless onboarding/offboarding.
- Managed endpoint management and security tooling (Kandji, Intune) and Google Workspace security in line with CIS Benchmark recommendations.

IT Infrastructure Analyst — QuintoAndar

Apr 2019 – Sep 2021 (2 years 6 months) · São Paulo, Brazil

- Implemented and maintained Jira Service Management workflows across departments; built automation scripts (Python, Bash, PowerShell, Google Apps Script) to streamline internal operations.
- Provided Level 2 internal support and managed access/identity provisioning.

IT Intern — Carl Zeiss do Brasil

Oct 2018 – Apr 2019 (7 months) · São Paulo, Brazil

- Provided remote and on-site technical support, managed device fleet, backups, and access provisioning across the company.

IT Support Intern — Verisure

Aug 2017 – Sep 2018 (1 year 2 months) · São Paulo, Brazil

- Handled service requests and incidents within SLA targets; managed assets and users via Active Directory.

Junior Apprentice, IT — Carl Zeiss do Brasil

Aug 2015 – Dec 2016 (1 year 5 months) · São Paulo, Brazil

- Provided remote troubleshooting, device configuration, and backup support.

EDUCATION

Impacta Tecnologia

Associate Degree (Tecnólogo), Computer Systems Analysis & Development — in progress, expected 2027

LANGUAGES

English — Full Professional Proficiency · Portuguese — Native
